Experiment No.:06

Aim:Develop a chatbot using Dialogflow or Rasa with basic encryption techniques (e.g., hashing user inputs).

Name:Tejasvini Fulari

Roll No.:24107039

Batch-B

In [8]:
```
import hashlib
import base64
```

In [9]:
```
def secure_user_input(raw_text):
    if not raw_text or not raw_text.strip():
        return {"error": "No input provided"}

    sha256_hash = hashlib.sha256(raw_text.encode('utf-8')).hexdigest()

    encoded_bytes = base64.b64encode(raw_text.encode('utf-8'))
    secure_token = f"ENC_{encoded_bytes.decode('utf-8')}"

    secured_payload = {
        "status": "secured",
        "hash": sha256_hash,
        "token": secure_token
    }

    del raw_text

    return secured_payload
```

In [11]:
```
user_message = "MySuperSecretPin123"

print(f"User Input Received: {user_message}\n")

security_result = secure_user_input(user_message)

print("--- Secure Output Logs ---")
print(f"SHA-256 (Save to Database for login checks): {security_result['hash']}")
print(f"Masked Token (Safe for system routing):      {security_result['token']}")
```

```
User Input Received: MySuperSecretPin123

--- Secure Output Logs ---
SHA-256 (Save to Database for login checks): 0b3bf9a2c5d2eea3ec12aa35529c0bcab
ae3c9b65d83e8e72e18c0ef4830d2d5
Masked Token (Safe for system routing):      ENC_TXlTdXBlclNlY3JldFBpbjEyMw==
```
